FOREWORD

NEW PLANTS. The following "Aristocrats" have not before been in our list. The references given are to articles concerning them by the best authorities.

Cotoneaster multiflora, Ser. 3, Vol. III, p. 32, Arnold Arboretum Bulletin.

" *racemiflora veitchii*, Vol. 2, p. 26, Morton Arboretum Bulletin.

Crab—Arnolds, *Aristocrats of Garden*, p. 208.

Sargent, Ser. 3, Vol. III, p. 20, Arnold Arboretum Bulletin.

Zumi, *Aristocrats of Garden*, p. 209.

Sorbaria arborea, Ser. 3, Vol. III, p. 60, Arnold Arboretum Bulletin.

Spirea veitchii, Ser. 3, Vol. II, p. 56, Arnold Arboretum Bulletin.

Numerous others are growing, and will be offered in following lists. Some are available now in small quantities.

We keep an index of plants which are in the trade and will gladly furnish information as to where any rare plant may be procured.

The wide variety of hardy plant material wanted by up-to-date gardeners makes a list so long that only more important facts about each item can be given, and we have tried to give these as accurately and as briefly as possible. At best, no description gives one the accurate impression of a plant that actually seeing it does, so we invite those interested to come and see the various plants during the growing season. After the main delivery season someone is usually available to pilot visitors about the grounds. Specimens wanted for particular places can be tagged for delivery the next planting season.

LOCATION. Our office and packing house is just south of the C., R. I. & P. and W., C. F. & N. Stations in Center Point, eighteen miles from Cedar Rapids and twenty-five from Independence on Primary No. 11. The fields extend one-half mile further south and orchards of fruit and nut trees are one and one-half miles south-east on Primary 11.

A clay block building 100 feet square, constructed for this purpose, provides protection for handling and packing stock. Evergreens, large shade trees, and most perennials are dug as required for sending out.

TERMS

PRICES given are for the stock, properly packed and delivered at the Nursery, the stations here, or at nearby towns in case we are making a general delivery there. Small plants will be sent by parcel post within the second zone or the third zone, if not too heavy. Large trees or shrubs can not be sent by parcel post.

CONDITIONS. All orders are accepted on condition that they shall be void should any injury befall the stock from hail, frost, fire, or other causes beyond our control. Deliveries are subject to delay by bad weather, bad roads, strikes, accidents, embargoes and causes beyond our control.

TERMS are cash on or before the delivery of the stock, unless previously otherwise agreed upon. Remittances may be by check, or any convenient form, payable to Snyder Brothers, Inc.

CLAIMS for errors or shortage must be made immediately upon the receipt of the stock.

GUARANTEE OF GENUINENESS. While we exercise the utmost diligence to have all of our varieties true to name, and hold ourselves in readiness on proper proof to replace all trees, etc., that prove untrue to name, we do not give any warranty, expressed or implied, and in case of any error on our part, it is mutually agreed between the purchaser and ourselves that we shall not at any time be held responsible for any sum greater than amount originally paid for the said trees.

APPLES

Apple trees should be planted 30x30 feet apart. They respond to good cultivation and care as freely as does corn or any other crop. Our trees are graded according to the standard rules of grading. The 5 to 6 foot size caliper $\frac{1}{8}$ in. and up; the other sizes $\frac{5}{8}$ to $\frac{1}{16}$ in. and $\frac{1}{2}$ to $\frac{3}{8}$ in., respectively. Many varieties will run considerably taller than rated, and a few dwarf growing kinds are shorter.

The following is a list of the main varieties of apples we have this spring, arranged approximately in the order of their ripening:

EARLY VARIETIES

Liveland (Lowland Raspberry)
Yellow Transparent
Duchess (Oldenburg)

Benoni
Nichner

Liveland is the best real early apple; it is beautifully colored, has the highest quality, and keeps remarkably for an early apple.

Benoni and Nichner have high quality and ripen just after Duchess.

FALL VARIETIES

Bailey Sweet
Ramsdell Sweet

Wealthy
Snow (Fameuse)

Wolf River
Longfield

WINTER VARIETIES

McIntosh
Sharon
Delicious
Jonathan
Ames
Grimes (Golden)
King David
Banana (Winter)
Golden Russet
Isherwood

Rome Beauty
Windsor
Iowa Blush
Hawkeye Greening
Tolman Sweet
Northern Spy
Roman Stem
N. W. Greening
Stayman (Winesap)

Allen's Choice
Salome
Mammoth Black Twig
York Imperial
Gano
Black Ben Davis
Ben Davis
Nelson Sweet
Malinda
Rall's (Janet or Geniton)

McIntosh we consider perhaps the most choice commercial variety for the North. Sharon is one of the best new introductions from Ames.

CRAB APPLES

Hyslop
Whitney (No. 20)

Virginia
White Arctic
Transcendant

Sweet Russet
Wynema

Wynema is a hybrid Wild Crab, growing 8 to 9 ft. and bearing immense crops of fruit about the size and color of Whitney, but otherwise like the small green wild crabs.

Virginia is unexcelled as a stock upon which to topwork varieties such as Jonathan, Grimes, Stayman, etc., and therefore is the best foundation for a permanent orchard.

DWARF APPLES

Delicious	Wealthy	Yellow Transparent
PRICES of Dwarf Apple		Each Per 10
4 to 5 feet		\$1.00 \$9.00

ANOKA

Anoka is a hybrid produced by Prof. Hansen and is not strictly a dwarf, but bears extremely young. He says, "The fruit is two and one-half inches in diameter, round, Duchess type of coloring, flesh white, good subacid, season September."

PRICE of Anoka:	Each	Per 10
5 to 6 feet	\$1.00	\$9.00
3 to 4 feet	.60	5.00

PEACHES

Peaches in central Iowa should be planted where they will have as much protection as possible. Bailey Seedlings are hardiest.

Leading varieties—Champion, Bokara, and Elberta.

PRICES—		Each	Per 10
Budded trees	4 to 5 ft.	\$0.75	\$6.00
	3 to 4 ft.	.50	4.00
Bailey Seedlings	3 to 4 ft.	.25	2.00
Fruit small, highly flavored.	2 to 3 ft.	.20	1.50

PEARS

More than one variety should be planted to insure pollination. The standard, or large growing trees, should be spaced 18 to 20 ft. apart; the Dwarfs, 10 ft. The following is a list of the varieties we have, arranged in approximate order of ripening:

Wilder	Bartlett	Kieffer
Clapp's Favorite	Seckel	Patten
Longworth	Flemish Beauty	Anjou

PRICES of all Standard Pears:	Each	Per 10
5 to 6 feet	\$1.00	\$9.00
4 to 5 feet	.80	7.50
3 to 4 feet	.60	5.50

DWARF PEARS are grafted on Quince roots, which dwarf and bring them into bearing earlier. The following varieties in the 4 to 5 and 3 to 4 foot sizes only:

Clapp's Favorite	Bartlett	Kieffer
Duchess	Seckel	Anjou
	Flemish Beauty	

PRICES of all Dwarf Pears:	Each	Per 10
4 to 5 feet	\$1.00	\$9.00
3 to 4 feet	.75	7.00

Duchess does particularly well as a dwarf.

CHERRIES

(In order of ripening)

Early Richmond
Montmorency

Ostheime

Yellow Glass
English Morello

Early Richmond and Montmorency are the most dependable and the most planted. Yellow Glass is a true, sweet cherry and is more tender than the others. English Morello is very late and very dark in color.

PRICES of above varieties:

Damson
Desoto

Fellenburg
German Prune
Gold
Lombard
Miner
X Oka
Omaha
Red Wing

Sapa
St. Anthony
Terry
Toka
Underwood
Wachampa
X Wyckoff

Terry, Beatty, and Desoto are all pure American varieties of splendid quality for all purposes, and we believe most dependable of all for the far North.

Red Wing, St. Anthony, and Underwood are new plums recently originated at the Minnesota State Fruit Breeding Farm. They are all large, or very large, and excellent varieties. Red Wing has done extra well here.

Abundance and Burbank are Japanese varieties, which are much prized by some, but usually overbear and are short-lived here.

Oka, Sapa, and Wachampa are all hybrids of the Western Sand Cherry produced by Professor Hansen, and all make very crooked trees. The fruit is of medium size, has purplish flesh, very small pits, and is very fine for canning. Wachampa is very similar to Sapa except the flesh is a lighter color. Oka is most dwarf.

Toka is also a hybrid produced by Professor Hansen and generally included in the group known as the Hansen Hybrids. It is a cross of the American Plum and Prunus Simoni. The fruit is bright red, of good size, and has a very pronounced apricot fragrance and flavor. Many people think this the best plum in our whole list.

Damson, German Prune, and Lombard are all European varieties, which are often spoke of as blue plums.

Wyckoff is a variety of medium size and light red color with a very thin skin and especially fine for canning, no other variety excelling it for this purpose.

GRAPES

(In order of ripening)

Beta, black	Wyoming, red	Niagara, white
Hungarian, black	Worden, black	Caco, red
Moore Early, black	Delaware, red	Concord, black
Diamond (Moore's, white)	Lucile, red	Agawan, red

Beta and Hungarian are small grapes, but very hardy and well suited for arbors and pergolas.

Concord is the best shipping variety and predominates in commercial plantings.

Worden and Moore Early are larger and sweeter than Concord and should be included in the home vineyard.

PRICES—	Each	Per 10	Per 100

PRICES—2-year plants	30c each	\$2.50 per 10

RASPBERRIES

The purple and black varieties grow from tips, red ones from suckers. For home use, the purple caps will produce more fruit than the others.

Cumberland is the most planted of the black caps.

Latham is far the best and most profitable of the red varieties. Plant in hedge rows about two feet apart in the rows.

BLACKBERRIES AND DEWBERRIES

We have found the Snyder Blackberry the most dependable of many kinds tried and confine our growing to it. All the plants offered are root cutting plants; none are suckers from an old run-out patch.

PRICES—Snyder Blackberry	Per 10	Per 100	Per 1000

Lucretia Dewberry, tip plants75	6.00	50.00

STRAWBERRIES

The Dunlap Strawberry succeeds so well under so many different conditions and is so good for all purposes that we advise it as the best spring bearing variety for general planting. Put out a new bed each year in rows $3\frac{1}{2}$ to 4 feet apart and 18 inches in the row.

The fall bearing Strawberries do best north of Central Iowa, where if proper care is given and conditions are favorable, wonderful results are often obtained. They should be planted early in the spring on good, rich ground and a new patch planted each year.

PRICES—	Per 100	Per 1000
Dunlap	\$1.00	\$ 9.00
Progressive, fall bearing	2.50	20.00
Champion, fall bearing	2.50	20.00
Mastodon, fall bearing	3.00	25.00

ASPARAGUS

This is one of the first ready to use and most wholesome of the spring vegetables. Plant it along the fence and plant it by the hundred rather than by the dozen.

Martha Washington (Rust Proof), or the older varieties.

PRICES—	Per 10	Per 100	Per 1000
Two-year plants	\$0.40	\$2.50	\$20.00

RHUBARB

Rhubarb, like Asparagus, should be planted where it need not be disturbed and will produce a great lot of wholesome food with the minimum amount of work. Heavy clumps of it may be forced in the cellar in winter if they are dug in the fall and allowed to freeze hard before taking in.

PRICES—	Each	Per 10	Per 100
Two-year roots	\$0.20	\$1.50	\$10.00
One-year roots15	1.00	6.00

EVERGREENS

All the evergreens we offer are dug fresh as sent out. If the buyer comes to the Nursery after them, they can be lifted directly from the row to his truck and have a minimum of exposure. If the roots of evergreen ever become thoroughly dry they cannot be revived as other trees can. Failure in transplanting them is largely due to allowing them to become dry while planting, to not packing good, mellow, moist soil very firmly around the roots, or to not properly conserving moisture about them through the summer by frequent shallow cultivation and by mulching.

SPACING. Plant Pines or Spruces 7 to 8 feet apart for single row windbreaks, and 10 to 12 feet apart for double rows. For low hedges plant 18 to 24 inches apart, depending on size.

SOILS. Plant Pines on dry or well drained soil. The Bull Pine will do well on very gravelly soil. In places where it is quite wet at times Spruce will be better, and in very wet places Arborvitae is the best.

PESTS. Red Spider or Mite causes much damage during a drouth in the growing season. A rusty appearance is likely to be due to it. Water applied under a high pressure to the tops every few days is an effective remedy. A soluble oil spray applied according to the manufacturer's directions is also effective, and very finely divided sulphur applied with a duster is now recommended.

EVERGREENS FOR WINDBREAKS AND HEDGES

Prices in this section do not include Ball and Burlap; if wanted that way, the expense of it must be added. Each X represents one transplanting.

SPECIMEN EVERGREENS—For Landscape Planting

(Prices in this section include ball and burlap)

The following are well developed trees and are dug with a solid ball of earth securely burlapped and bound. They are much heavier to handle, but easier to plant and more certain to grow. In planting do not remove the burlap. After the tree is in place and hole partly filled to hold it, cut the burlap loose around the top and pour in plenty of water. Large trees over 8 feet should be ordered before hard freezing so they can be mulched for digging and the ball of dirt frozen solidly before moving. Imperfect specimens (defective on one side or at the bottom) can often be used as effectively in groups and will be priced according to quality. Each X represents one transplanting.

DECIDUOUS TREES AND SHRUBS

Trees and Shrubs are included under one heading, as it is difficult to distinguish between them and there is no need for trying to do so. Botanical names are given preference except where the common names are well established and better known. Larger sizes than are quoted can be furnished of many trees and shrubs and correspondence concerning them is invited, also larger quantities will be gladly quoted. The figures after the names indicate the size attained at maturity under average conditions, and will vary considerably in different places.

Special requirements such as acid or limestone soil, moist or dry soil, shade or full exposure, winter protection, etc., are noted if important.

	Size	Each	Per 10

IRIS

Bearded Iris may be planted almost any time, but preferably not at or just previous to blooming time, and should be planted shallow, on dry, well drained, neutral or limestone soil. Siberian varieties and other fibrous rooted kinds endure moisture and more acid soil, and should not be moved during the hot summer months. The effect is better if a group of one kind or color is planted rather than single plants of many colors.

GRAFTED NUT TREES

HICKORIES**PECANS****HICCANS**

The demand for these trees continues to exceed the supply, and probably will for a long time, because of the limited number of stocks which are ready to graft, it taking from three to eight years for them to attain sufficient size. This necessarily will keep the price of grafted trees comparatively high, and those contemplating establishing large plantings will do well to plant nuts in place, so as to avoid transplanting, and graft the seedlings when large enough. Cions for this purpose can be supplied in season, or a limited number of trees can be furnished for parent trees, and will be quoted on application.

BLACK WALNUTS. The steadily decreasing number of Walnut trees and increasing use of Walnut for interior finishing assures a good future market for Walnut logs. Many a tree will bring enough to buy an acre of ground about it, or even several acres, for they may be grown on bottom land which overflows. For the production of timber alone, seedling trees could be used, but would be less uniform in growth than grafted trees, and for the production of nuts, all would be inferior and some have no value at all. The grafted kinds are well worth planting for the nuts alone. The use of Walnut meats is rapidly increasing in ice cream, candy, and cakes, for no other nut, except the hickory, retains its flavor so well after heating.

Thomas is the best known variety and succeeds over a wide territory. The tree is hardy, very vigorous, productive and a very young bearer, switches one year old often bearing the following season. The nuts are large, fairly thin shelled. Kernels come out easily and yield ten pounds or more per bushel of meats of fine quality.

Ohio is a close rival of the Thomas, and by some is considered rather superior to it in certain respects.

Stabler is a native of Maryland and not so thrifty or hardy as Thomas or Ohio. The nut is of fair size, very thin-shelled, and often not divided, so the meats can be extracted in one piece.

Besides the kinds listed above, a few trees are available of several others more recently discovered, and will be quoted on application.

Thomas	\$3.00	\$2.50	\$2.25	\$2.00	\$1.50
Ohio			2.25	2.00	1.50
Stabler				2.00	1.50

THE WINKLER HAZLENUT is the best and largest of many kinds we have tried. The nuts are produced freely, are larger than many European Filberts and have the choice quality of the small wild hazlenut. They are uniformly large, sometimes over one inch long. Often the kernels almost burst the shells open and they can be easily pried apart with a light knife or one's thumb nail. The bush is shapely and grows to about six feet, making a desirable ornamental shrub. The foliage is good and none on the place colors more beautifully in autumn. A sample of the nuts will be sent to those interested.

“ “	24-30 in.	2.00 each
“ “	30-36 in.	2.50 each

CHESTNUTS. The grafted varieties of Chestnuts bear much younger than seedlings and the nuts are larger. Always more than one variety should be planted to insure fertilization. Chestnut blight has never been in this section.

Rush Chinquapin. A hybrid of Chestnut and Chinquapin, with larger nuts than Chinquapin, very sweet, and extra good. The tree is dwarf and very productive.

Fuller. A productive, early bearing, hardy variety with large nuts of splendid quality.

Riehl #57. Very much like Fuller, but even more productive.
